

Automatic Grease Trap **BIOSEPTIC**

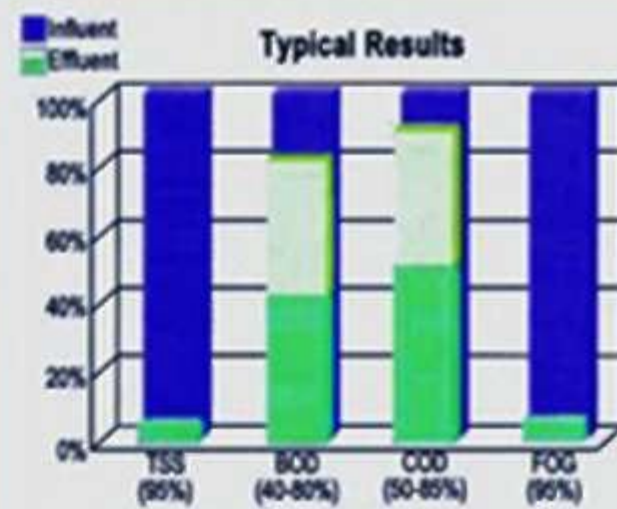

The BIOSEPTIC Automatic Grease Trap is an innovative approach to Grease Flotation that utilizes the proven technologies found in our high-rate Grease Flotation systems. The AGT unique physical design with slanted body, built-in microbubble aerator, stainless steel screw conveyor and trouble-free scrapper design significantly lower the cost of manufacturing. The overall result is a low cost, high quality FRP tank with high efficiency performance to handle greases, oils & fats.

The BIOSEPTIC AGT System also removes colloidal and suspended solids, as well as the BOD and COD associated with these contaminants, from industrial and municipal effluents. It automatically separates these materials from the liquid waste for disposal. This process greatly decreases pollution loading, lowers your sewer charges, and renders the effluent suitable for disposal into public sewers or to secondary treatment.

Advantages

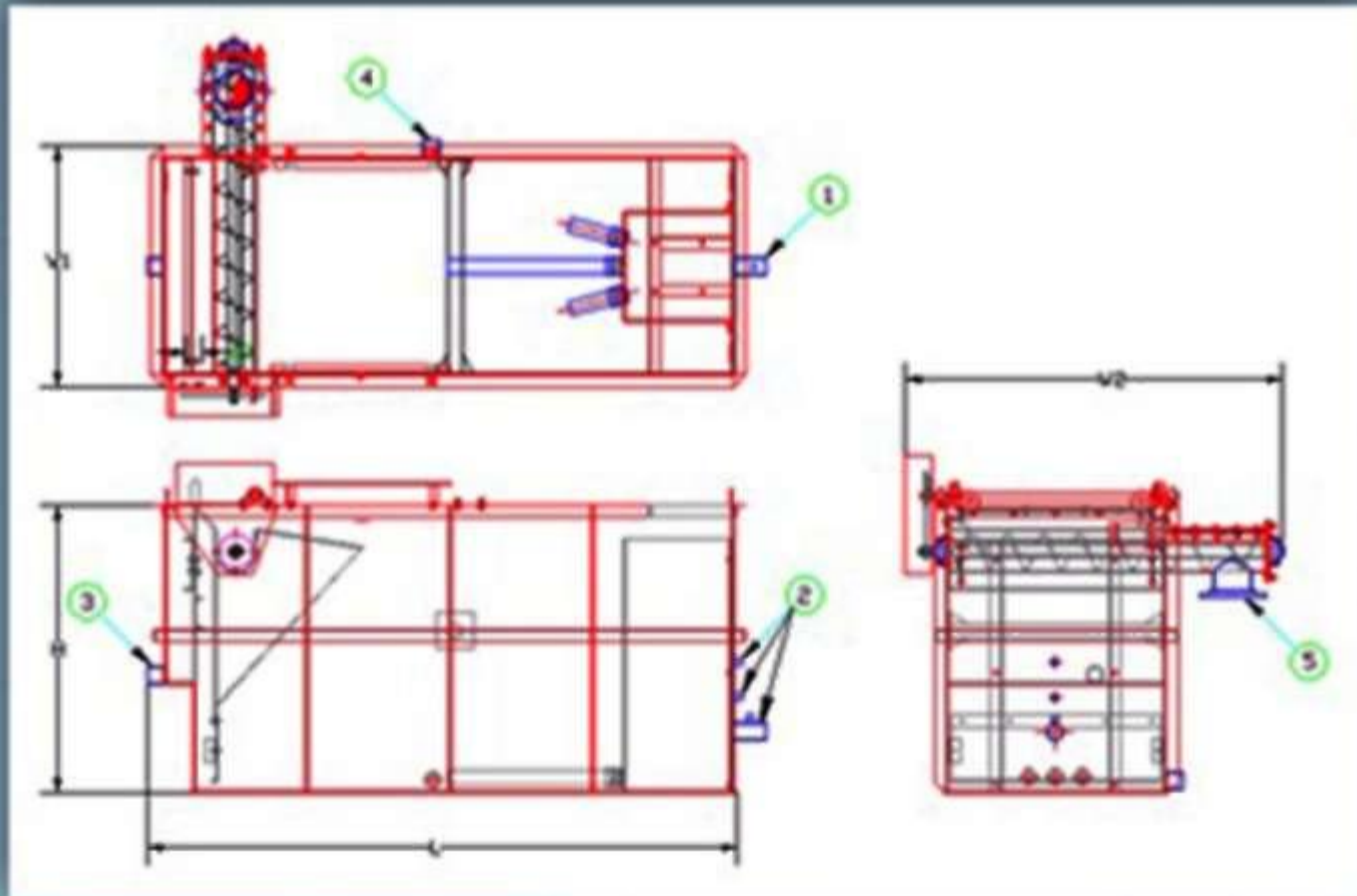

- Compact, efficient design
- Easy to install and operate
- Low operational costs
- No recirculation pumps required
- No air pressure vessel required
- No underground plumbing required
- No costly high-pressure pumps
- No floc pre-mix chamber or tank
- No flash mixer required
- No calibration of air control valves
- No jets, diffuser or nozzle to clean
- Easy access to all moving parts

Application :

Hotels, Restaurants, Kitchen, Pulp & Paper, Slaughterhouses, Laundry, Commercial Centers, Printing, Bakeries, Vegetable Processing, Textile, Beverage, Pharmaceutical, Fiberglass, Tanneries, Plastic, Shopping Centers, Chemical, Fertilizers, Breweries, Snack Food, Printing, Paint, Poultry, Ice Cream, Yoghurt, Beef

Model	Flowrate m ³ /hour	Dimension (m)			Power KW	Removal %
		L	W1	H
